Quality • not only on the surface®

SAND-PERFECT 600

Sand-Perfect 600 is designed for sanding a various range of items, from flat items to very complex items. The double-spindled Sand-Perfect 600 can be used in any production, no matter if the material is composite, wood or metal. This machine is ideal for replacing manual sanding.

Height adjustment makes Sand-Perfect 600 an ergonomic machine that quickly and easily can be adjusted to any user.

Sand-Perfect 600 is an effective and flexible machine eliminating all kinds of manual hand sanding and can be used by everyone in the industry.

Sand-Perfect 600 normally comes with a spindle allowing a working width of 600mm on both sides. Furthermore, it is possible to mount an extra head on the shaft, which allows you to use more grits, heights and diameters on the same machine.

The machine is easy and simple to operate via a control panel at the front of the machine. The sander has height-adjustable rubber feet, which eliminate all vibrations.

Due to the height adjustment, Sand-Perfect 600 can also be combined with a conveyor belt. This means that automatic sanding is achieved at very reasonable costs.
